Freshness

Refrigerators - Freezers

## Energy Label

According to the EU Regulation 92/75/EK, the energy label is placed on all Inventor's appliances and includes the following:

- A Brand name
- B Product code
- C Energy classification
- D Colored arrows are used to differentiate between energy efficient and less energy efficient products: dark green indicates a highly efficient product and red indicates a low efficient product
- E Annual energy consumption in kWh
- F Capacity of all storage compartments in liters
- G Freezing food capacity in liters
- H Noise level in decibels

## Characteristics

### Energy Consumption

The new Inventor refrigerators having low power consumption ranked in energy class A+. Due to the low energy consumption there is a noticeable reduction on the electricity bill.

### Minimal Design

Discover the light design of Inventor's refrigerators. Lightweight doors with clean lines, modern, charming design and unrivalled brightness. The new Inventor's refrigerators series epitomizes style and is easily suited in any kitchen space whether the design is contemporary or classic.

### Easily Reversed Door

Inventor's refrigerators include easily adjustable doors so they can fit in any kitchen space.

### Interior Light

The refrigerator's interior is lit by low energy light bulbs instead of the usual incandescent bulbs and as a result there is an incomparably longer lifetime, higher brightness and nearly zero energy consumption.

### Adjustable Feet

Adjustable feet provide functionality to better manage Inventor's refrigerators.

### Adjustable shelves

The shelves of the refrigerators can be easily removed, allowing the interior space to be easily adjusted to your specific needs.

The energy classification is based on an energy efficiency index (EEI) which takes into account: the annual energy consumption, the volume, the lowest temperature of different compartments.

Other factors affecting this index are also the type of construction (built in appliances or free standing refrigerators) and the availability of the frost free feature.

## Technology in Refrigeration

# Fresh Life

## Consistent Cold Diffusion, Excellent Preservations System

Light & simple design, compatible with every type of kitchen.  
Includes adjustments for maintaining correct humidity.  
Excellent food and vegetables preservation with less consumption  
and greater performance among the same models in the market
